## WHAT IS KNIT BACKING?

Applied to the back of fabrics, knit backing adds body, resilience and durability to textiles while eliminating seam slippage. It is a widely accepted technique used to reinforce fabrics used in upholstery, wall coverings, cornices, duvet covers, quilts, shoe uppers, handbags and more.

## WHAT IS PAPER BACKING?

Paper backing – a type of non-woven, paper-type backing– provides the necessary stiffness to fabrics to make them more suitable for wallpaper type applications. SilkGard® stain protection is applied to these fabrics to keep them from spotting due to the adhesives required for pasting them onto walls.

## WHAT IS STAIN PROTECTION?

SilkGard® stain protection is a chemical formulation that protects fabrics from soil and moisture. It is specially designed to neither change the texture nor the color of the original fabric.

## CUSTOM BACKING BY SUNSILKS

Sunsilks has developed its own proprietary, custom backing process that minimizes puckering, bonding separation and grain distortion– problems which are far too common with fabrics backed using conventional methods. Fabrics of natural fibers have textural variations. Some of the common visual effects associated with these variations are creases, wrinkles, uneven selvages, shadings, mis-weaves and grain distortions. Sunsilks has developed backing techniques that can compensate for these natural variations and enhance the fabrics’ visual appeal. Our systematic approach has allowed us to successfully knit back uneven surface textures, including those of embroidered and beaded fabrics. At Sunsilks, we will work with you to design a custom solution for all your backing needs.
